INTRODUCTION

Over the past decade, particularly during the COVID-19 pandemic, online meal ordering and food delivery platforms (FODPs) have become increasingly popular, reshaping lifestyles and job opportunities. Platforms like GrabFood and FoodPanda have inspired the creation of a new food ordering website, Tap N' Makan, which aims to offer a user-friendly and comprehensive experience while addressing common issues in the industry.

Customers often face high delivery fees and inaccurate deliveries, leading to dissatisfaction and negative reviews. Tap N' Makan seeks to solve these problems by ensuring a secure and reliable delivery process through verification methods like photo proof. The website will also feature a rating system that allows customers to rate meals and sort options based on their top scores, simplifying meal selection.

Additionally, Tap N' Makan plans to reward customers with in-app points for each transaction, which can be exchanged for discounts and bonuses. This incentivizes repeat orders and helps offset delivery costs. The platform aims to maintain affordable fees and meal prices to attract more customers and provide a satisfying online food ordering experience.

AIM & OBJECTIVES

- Establish a reporting system to prevent scams
- Optimize website design for user-friendliness
- Offer incentives to attract more customers

LITERATURE REVIEW

Feature	GrabFood	FoodPanda	Dominos	Tap N' Makan
Food Reviewing	✗	✓	✗	✓
Delivery Checkout	✓	✓	✓	✓
Delivery Completion	✗	✗	✗	✓
Discounts & Rewards	✓	✓	✓	✓
Seat Reservation	✗	✗	✗	✓
Preordering Food	✗	✗	✗	✓
Selection Cart	✓	✓	✓	✓

CONCLUSION

The Tap N' Makan project achieved its objectives by effectively implementing security measures to counter scams and designing an attractive website menu to encourage food purchases. The inclusion of incentives such as coupons and discounts also helped attract more customers to the website.

Waterfall vs. V-Model vs. Agile: A comparative study on SDLC - *International Journal of Information Technology and Business Management*

METHODOLOGY

The waterfall model is a linear, sequential approach to application development, consisting of five stages: Planning & Analysis, Design, Implementation, Verification & Validation, and Maintenance. Each phase must be completed before progressing to the next, providing a structured and well-defined process favored by development and manufacturing firms. However, the model is inflexible with changing requirements, potentially causing delays and extra work due to the need to revisit earlier stages. The next section will explain how the Tap N' Makan application was developed using this method.
